Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshiaki (JP 10-085361) in view of Yamaura (EP 0247715). Yoshiaki teaches a hollow tight fitting band having a tube therein, and fastening means which may be used for the purpose of muscle development. Yoshiaki teaches the claimed invention except for the limitations drawn to the limiter plate. Yamaura teaches in a device worn around a user's limb, a 'limiter plate' including a series of segmented elements which are adapted to flexibly move in a curve, and configured so that adjacent pairs of segmented components overlap each other at their ends like roof tiles, with grooves between the segments contributing to the flexible nature of the band. It would have been obvious to one of ordinary skill in the art at the time of invention to provide Yoshiaki with a limiter plate as taught by Yamaura in order to prevent unwanted expansion of the tube during inflation and subsequent exercise.
